What's in here

1	Welcome	What this app is and what it is for
2	Signing in	Your first login and your password
3	Finding your way around	The sidebar and your dashboard
4	Your tasks	The daily loop — accept, work, update, submit
5	Your hours	How time is counted, and your timesheet
6	Your clients	What you can see and how to work on them
7	Documents	Uploading, requesting and finding things
8	Workpapers	GST recon, ITR computation, statements, notices
9	What you cannot see	And why — so you are not left guessing
★	Quick reference	One page to keep next to your desk

1 Welcome

J-TACS is where your firm keeps its clients, its work and its deadlines. For you it does three things: it tells you what to do, it keeps everything about a client in one place, and it records the hours you spend.

It tells you what to do

Work assigned to you appears in **My Tasks** with a client, a deadline and whatever your manager attached to it. You do not need to be told separately.

Everything about a client is together

Open a client and you get their details, their work, their documents and their filing history on one screen. No hunting through email.

It records your hours

Your time against clients and tasks — which is what your timesheet, and your firm's billing, are built from.

It keeps you out of trouble

Deadlines, checklists and reminders. When work is blocked on a client you can say so, and it becomes somebody's job to chase them.

Your day, in one line

Sign in

Accept your tasks

Do the work

Log your time

Submit for review

You cannot break anything

Deleting is reversible, work can move backwards when figures change, and anything that would genuinely cause a problem is stopped with an explanation. Click around — that is the fastest way to learn it.

2 Signing in

Your manager creates your account and the app emails you a temporary password.

1 Find the email

It has your temporary password in it. If it has not arrived, check your spam folder, then ask your manager — they can read it off their screen and give it to you directly.

2 Sign in

Use your **work email address** and that temporary password.

3 Change the password straight away

Go to **Settings** and set your own. Do not carry on using the temporary one.

4 If you get locked out

Forgot password on the sign-in screen emails you a reset link. You do not need to ask anybody.

Your screen may be empty at first — this is normal

You see only the clients you have been assigned to and the tasks given to you. On day one there may be neither. Nothing is broken and you have not missed a step: ask your manager to assign you a client, and the screen fills up.

One account, one person

Your account is yours. Everything you do is recorded against your name — which is how you get credit for your work, so never sign in as somebody else or let anybody use your login.

3 Finding your way around

The sidebar on the left is your menu. It is grouped, and you can pin the things you use most to the top.

WHERE	WHAT IT IS FOR
My Dashboard	Your day at a glance: what is due, what is overdue, what is waiting on you.
My Tasks	Everything assigned to you. Where you will spend most of your time.
My Clients	The clients you have been assigned to.
My Timesheet	Your hours.
Calendar	Statutory deadlines and your firm's own dates.
GST Recon, ITR, Statements, Notices	The working papers for your clients.
Messaging	Emails and templates for talking to clients.
Notifications	Alerts — a task assigned to you, work sent back, a deadline near.
Settings	Your password and your preferences.

Pin your favourites

Hover over any menu item and click the star. It moves to **Favourites** at the top of the sidebar. The last three places you visited also appear under **Recent**. Most people pin **My Tasks** and **My Timesheet**.

Notifications

The bell tells you when a task is assigned to you, when work you submitted is sent back, and when a deadline is close. Clicking a notification takes you straight to the thing it is about, not to a general list.

4 Your tasks

This is the heart of the job. A task is one piece of work for one client, with a deadline and an owner — you.

Step one: accept it, or decline it

A new task waits for you to accept it. This is not a formality — until you accept, your manager does not know it has landed with someone who can do it.

If you cannot take it, decline it — do not just leave it

Declining sends it straight back to your manager for reallocation, with your reason. A task left sitting unaccepted looks handled and is not, and that is how deadlines get missed.

The reasons you can give:

No capacity this week

Not my client

Outside what I do

Not enough information to start

I'm away when this is due

Something else

Step two: work on it

Open the task. Everything belonging to it is there — the client, the deadline, the checklist, attachments, and the comments where you and your manager talk about it. Tick checklist items as you go; your manager can see the progress without asking you.

Step three: keep the status honest

STATUS	USE IT WHEN
Not started	It is yours but you have not begun.
In progress	You are working on it.
Data awaited	You are stuck waiting for the client. Use this — see below.
Under review	You have finished. This is where you hand it over.
On hold	Genuinely paused, for a reason you have noted.
Filed / Done	You cannot set this. Your reviewer does.

Data awaited is the most useful status in the app

When you are waiting on the client for a document or a figure, set it. Your manager gets a list of exactly which clients are holding work up and chases them. If you leave it at **In progress**, it looks like *you* are the delay.

Step four: submit it

You cannot mark your own work Filed / Done

This is not a lack of trust — it is separation of duties, and it protects you. Somebody else always checks a filing before it goes out. Move it to **Under review** and a Manager or Partner signs it off.

If it comes back

Work sent back to you always carries a reason — the app requires one, so you will never get a silent rejection. You will be notified. Read the reason, fix it, and submit again.

5 Your hours

Two separate things: the hours the app notices, and the time you record against work. You should understand both.

How the app counts your presence

There is no clock-in button. While you have J-TACS open and are working in it, your browser quietly checks in every few minutes and your minutes add up.

What this means for you — two things worth knowing

You cannot lose your hours by forgetting to log out. If you close your laptop or your session goes quiet, it is closed off automatically at the last point you were genuinely working. Nothing is lost.

It only counts while the tab is actually open and visible. Leaving J-TACS open in a background tab overnight does not add hours. It measures presence, not the passage of time.

You show as **online** while you are active, and **idle** after about twenty minutes of nothing. Your manager and partner can see this — it is how they know who is available, not a way of watching you.

Your timesheet

My Timesheet is where you record time against a client and a task. This is different from presence: presence is when you were working, your timesheet is *what you were working on*.

1 Log time against the task, not just the client

It is what lets your firm see how long that kind of work actually takes.

2 Do it daily

Reconstructing a week on Friday afternoon is guesswork and everybody knows it.

3 Mark it billable when it is client work

Billable time can be put on the client's invoice. Your firm's billing depends on it being right.

Leave and absence

Tell your manager about planned leave so it is recorded in the app. It is not only about attendance — when leave is recorded, the app warns your manager if they try to give you a deadline that falls while you are away. Unrecorded leave means work lands on you anyway.

6 Your clients

My Clients shows the clients you have been assigned to. You will not see anybody else's — that is deliberate, not a fault.

The client screen

Open a client and everything about them is under one set of tabs.

TAB	WHAT IS THERE
Overview	Who they are, key dates, contacts.
Services	What your firm does for them.
Tasks	All the work for this client, including yours.
Documents	Their files, and requests you have sent them.
Compliance	Their filing calendar and where each period stands.
Workpapers	GST reconciliation, ITR computation, statements, notices.
Activity	Who did what.
Timeline	The client's history as one story.

Two tabs you will not see

Managers and Partners also get **Payments** and **Engagement** tabs. Those carry fees, and fees are not part of an Employee's view anywhere in the app. Nothing is wrong with your screen.

Talking to clients

Messaging holds the email templates your firm uses — reminders, document requests, acknowledgements. Using a template means the firm's wording goes out rather than yours, which is usually what you want.

Log the conversation

If you speak to a client on the phone, put a comment on the task or a note on the client. The next person to pick it up — possibly you in three months — will need it.

7 Documents

Every document belongs to a client. Putting it in the app rather than in your email is what makes it findable by anybody who needs it.

- 1 Upload to the client, not to your desktop**

The **Documents** tab on the client. Files are kept with versions, so replacing one does not destroy the old copy.
- 2 Request what you need**

Document Requests sends the client a list of exactly what is outstanding, and shows you what has come back. It beats another email asking for 'the balance sheet'.
- 3 Attach working files to the task**

Anything specific to a piece of work belongs on the task, so the reviewer has it in front of them.

Search finds documents too

The search box at the top searches across clients, tasks and documents together. It is usually faster than navigating.

8 Workpapers

Four purpose-built workbenches for the technical work, each tied to a client. You can reach them from the sidebar for a list across all your clients, or from a client's

Workpapers tab for just theirs.

GST Recon

Reconciles GSTR-2B against the purchase register and shows you the mismatches, rather than you doing it in a spreadsheet and mailing it around.

ITR Computation

Builds the computation and puts the old and new regimes side by side, so the comparison is on the record instead of in someone's head.

Financial Statements

Produces the P&L and balance sheet from an imported trial balance.

Notices

The register of tax notices and litigation — what arrived, the deadline to respond, and where it got to.

Work from the client, not the list

The sidebar entries are indexes across all your clients. When you are actually doing the work, open the client and use their **Workpapers** tab — everything is then in the context of the client it belongs to.

9 What you cannot see

So that you are never left wondering whether something is broken. These are all deliberate.

YOU CANNOT	WHY
See clients you are not assigned to	Your view is your workload. Ask your manager if you need one added.
See any invoice, payment or fee	Fees are not part of an Employee's view anywhere in the app — not on a screen, not in search, not on a client's page.
Mark your own work Filed / Done	Separation of duties. Somebody always checks a filing before it goes out. It protects you.
Open Leads, Quotations or Reports	New business and firm-wide reporting sit with Managers and Partners.
Add or edit team members	Managing people is a Manager's job.
See the firm-wide compliance overview	You see your own clients' compliance on each client's page.

If you need something you cannot reach

Ask your manager. Usually the answer is that a client needs to be assigned to you, which takes them ten seconds.

A good habit to finish on

At the end of the day: your time is logged, your task statuses reflect reality, and anything you are waiting on the client for is marked **Data awaited**. Three things, two minutes. It is what makes the next morning's list trustworthy — for you and for everybody else.

Employee quick reference

Everything important on one page.

Every day

1. Sign in — hours start counting
2. **Accept** new tasks (or decline with a reason)
3. Keep statuses honest as you work
4. Log your time against tasks
5. Submit finished work as **Under review**

Your statuses

Not started	yours, not begun
In progress	working on it
Data awaited	waiting on the client
Under review	finished, handed over
On hold	paused, with a note
Filed / Done	not yours to set

Declining a task

- No capacity this week
- Not my client
- Outside what I do
- Not enough information to start
- I'm away when this is due
- Something else

Always decline rather than leaving it sitting.

About your hours

- No clock-in button — presence is automatic
- Forgetting to log out costs you nothing
- Only counts while the tab is actually open
- Idle after about 20 minutes of nothing
- Your **timesheet** is separate — log what you worked on

Normal, not broken

- **Empty screen on day one** — no clients assigned yet
- **No Payments tab** — employees never see fees
- **Cannot set Filed / Done** — by design
- **Fewer menu items than your manager** — by design

Ask your manager to

- Assign you a client
- Reissue your password
- Record your planned leave
- Reallocate a task you declined
- Review work you have submitted

Good habits

- Set **Data awaited** the moment you are blocked
- Log time daily, not on Friday
- Put phone calls in the task comments
- Upload documents to the client, not your desktop
- Tick checklist items as you go

End of day

Three things, two minutes:

1. Time logged
2. Statuses reflect reality
3. Anything blocked marked **Data awaited**
